

In-Car Voice Commerce Could Unlock \$35B Annually for Automakers, Research Highlights Strong Consumer Appetite

In-car voice commerce presents strong opportunity for automakers to unlock new monetization opportunities, drive purchase decisions, and build long-term loyalty

SANTA CLARA, Calif.--(BUSINESS WIRE)--Jun. 4, 2025-- SoundHound AI, Inc. (Nasdaq: SOUN), a global leader in voice artificial intelligence, today released findings from a new study, commissioned by the company, revealing that consumers are eager to embrace in-car voice commerce. The findings point to an untapped opportunity for automakers to unlock new monetization and revenue streams, deepen customer loyalty, and enhance the in-car experience – with the technology projected to be worth \$35 billion annually ¹.

Voice commerce integrates ordering, payments, loyalty, and navigation directly into a car's voice assistant to provide a seamless, hands-free experience powered entirely by voice. Based on projected new vehicle shipments, SoundHound estimates that in-car voice commerce represents up to a \$35 billion annual opportunity for automakers.

Monetization Potential

According to the independent study, 73% of U.S. drivers who use or have access to voice assistants in their vehicles are willing to share value in exchange for voice commerce functionality. Specifically, **46% would pay to access the service**, – 18% would pay per transaction, 29% would pay a small subscription fee – **31% are open to hearing a few ads** per hour, and **29% would share personal data**.

This consumer openness presents automakers with multiple monetization pathways, ranging from paid premium services to ad-supported experiences and data-driven personalization – delivering a new, post-sale, revenue engine that adds to the customer experience.

Revenue Impact

Voice commerce will also directly influence purchasing decisions. The study found that **69% of consumers** currently in the market for a new vehicle say they would **prefer a car with in-car voice commerce capabilities over one without**. For automakers, this adds a new layer of opportunity, differentiation, and revenue upside during the consideration phase.

Loyalty Opportunity

In a market where automotive brand loyalty is declining – **47% of U.S. consumers are open to switching car brands**, according to [Statista](#) – voice AI can help OEMs stand out. By delivering utility beyond traditional in-vehicle controls, brands can increase loyalty.

72% of respondents said they would ask their voice assistant for product or service recommendations, positioning the assistant as trusted consumer companions and the brand as the facilitator of everyday needs. This behavior transforms the cockpit experience into a recurring brand engagement and commerce touchpoint.

Top In-Car Voice Commerce Use Cases

73% of respondents were interested in using in-car voice commerce. When participants were presented with specific use cases, 76% were interested in using it for food ordering, 73% for vehicle maintenance, 71% for parking, 59% for entertainment planning, and 58% for impulse retail purchases.

Example queries include:

- “Find a restaurant for date night and make a reservation for 7pm.”
- “What does this dashboard light mean? Book me a service appointment.”
- “Order ingredients for sausage and peppers from the grocery store and navigate me to the store for pick up.”
- “Find parking near the movie theater.”

“In-vehicle voice commerce is not only about convenience for drivers – it’s also a strategic revenue and retention opportunity for automakers,” said **Michael Zagorsek, COO at SoundHound AI**. “We are already working with innovation teams at several of the world’s largest OEMs to pilot and scale this capability, bringing SoundHound’s long-time vision to life.”

SoundHound will delve deeper into these findings during two upcoming keynote presentations. On June 4, COO Michael Zagorsek will present the research at *WardsAuto AutoTech* in Detroit, followed by a keynote from Dr. Pedram Faghfour, Head of Automotive & IoT, at *Car HMI Europe* on June 16.
